

Junior Java Developer

Hi there! 🙌

Create a simple java project with the console interface for university, which consist of departments and lectors. The lectors could work in more than one department. A lector could have one of degree (assistant, associate professor, professor).

All data is stored in relational database.

Please send us a link to the GitHub repository with your version of this project.

The app should implement such commands:

1. Who is head of department {department_name}

Answer: Head of {department_name} department is {head_of_department_name}

2. Show {department_name} statistic.

Answer: assistans - {assistams_count}.

associate professors - {associate_professors_count}

professors - {professors_count}

3. Show the average salary for department {department_name}.

Answer: The average salary of {department_name} is {average_salary}

4. Show count of employee for {department_name}.

Answer: {employee_count}

5. Global search by {template}.

Example: Global search by **van**

Answer: **Ivan** Petrenko, Petro **Ivanov**

Good luck! 💪
